

Asbestos– Time to Remove this Killer Dust

Mesothelioma is an aggressive cancer, this country has the highest number of sufferers in the world and there is currently no cure.

The only known cause of this cancer in the UK is exposure to asbestos, which is still found in over half a million non-domestic premises.

If we want to protect future generations from this terrible cancer we have to remove this killer dust.

MPs from all parties are now calling for the removal of asbestos from all public buildings by 2028. Please urge your MP to join them.

Dear, MP

MPs from the All Party Group on Occupational Health and Safety are calling for an asbestos eradication law and support for the removal of asbestos from all public buildings by 2028. I hope you will support such a law and help end the misery caused by asbestos related diseases.
